skin healthcare by innovative nanocapsules

# skin healthcare by innovative nanocapsules

www.skhincaps.eu

Using an innovative and sustainable in situ self-assembly technology, SKHINCAPS addresses the development of customised and safe nanocapsules to deliver novel products for skin healthcare applications, with increased efficiency and cost benefits:

- First layer garments containing nanoencapsulated phase-change materials (PCMs) for thermal management and skin comfort;
- Anti-ageing creams containing nanoencapsulated vitamins and antioxidants cocktail to improve skin anti-ageing effect;
- Antimicrobial lotions and textiles natural containing nanoencapsulated essential oils to prevent or mitigate bacterial infections on skin.

This project has received funding from the *European Union's Horizon 2020 research and innovation programme* under grant agreement no. 685909
